

0.4mm Pitch, 1.5 to 4.0mm Height, Board-to-Board and Board-to-FPC Connectors

DF40 Series

Space saving

■Features

1. High density mounting

Space saving design that has a minimum connector width, yet still retains a sufficient vacuum area for easy pick-and-place mounting
Minimum width : 3.38mm

2. Multiple stack height options

In addition to its space saving design, several stack heights are available and add versatility to any application. Stack heights : 1.5mm, 2.0mm, 2.5mm, 3.0mm, 3.5mm, and 4.0mm.

3. High contact reliability

Despite its small stature and low profile, the contacts deliver strong contact forces and an effective mating length of 0.45mm on the 1.5mm stacking height. This connector utilizes a locking system that prevents accidental unmating issues and emits a clear tactile click to ensure that mating has been completed.

4. Excellent self-aligning range

The use of guide ribs allows 0.33mm of self-alignment on this connector.

5. Reinforced structure with shock absorbing ribs

Both sides of the connector have been reinforced with the addition of shock absorbing ribs.

6. Solder wicking prevention

Nickel-plated barriers were added to protect the contact areas from potential solder wicking.

7. Contamination resistant design

When mated, the connector's design covers the contacts which help to keep dust and other debris away from the contacts. The SMT leads are kept very close to the connector housing which also helps to prevent shorts caused by debris on the exposed contacts.

8. RoHS compliant

Environment friendly and does not use RoHS specified prohibited materials.
All materials and substances used to produce these parts comply with the RoHS standards.

9. High speed signal with noise prevention

The shielded type can support high speed signal transmissions with noise prevention.

High contact reliability - effective mating length 0.45mm

Stacking height variations

Product Specifications

Ratings	Rated Current 0.3A	Operating Temperature Range -35 to +85°C (Note 1)	Storage Temperature Range -10 to +60°C (Note 2)
	Rated Voltage AC, DC 30V	Operating Humidity Range 20 to 80%	Storage Humidity Range 40 to 70% (Note 2)

Items	Specifications	Conditions
1. Insulation Resistance	50MΩ min	Measured with DC 100V
2. Withstanding Voltage	No flashover or breakdown	Apply AC 100V for 1 minute
3. Contact Resistance	90mΩ max	Measured with AC 20mV, 1 kHz and 1mA
4. Vibration Resistance	No electrical discontinuity of 1μs or greater	Frequency 10-55 Hz, half amplitude 0.75mm, 3 directions for 2 hours
5. Humidity Resistance	Contact resistance : 90mΩ max Insulation resistance : 25mΩ min	Left at temperature 40 ± 2°C, humidity 90 to 95%, 96 hours
6. Temperature Cycles	Contact resistance : 90mΩ max Insulation resistance : 50mΩ min	(-55°C : 30 minutes → 5~35°C : 10 minutes → 85°C : 30 minutes → 5~35°C : 10 minutes) 5 cycles
7. Durability	Contact resistance : 90mΩ max	30 mating cycles
8. Soldering Heat Resistance	Should be no melting of resin parts that affects its performance	Reflow : according to the Recommended Temperature Profile Hand solder : Soldering iron temperature 350°C, no more than 3 seconds.

Note 1 : Includes temperature rise caused by current flow.

Note 2 : The term "storage" here refers to products stored for a long period prior to board mounting and use. The operating temperature and humidity range covers the non-energized condition of connectors after board mounting and the temporary storage conditions during transportation, etc.

Note 1 : For 10 to 60 contact position parts, the carrier tape only has one row of holes. The carrier for parts with 70 contacts and above has two rows of holes.

Operating Precautions

1. Recommended Solder Profile	 <p>The graph shows the recommended soldering temperature profile. The y-axis represents Temperature (°C) from 0 to 250, and the x-axis represents Heating time (sec.) from 0 to 300. The profile starts at 'Normal temperature' (approx. 25°C), rises to 150°C, then to 180°C. A horizontal segment at 180°C is labeled '90 to 120 seconds'. The temperature then rises to a peak of 250°C, with a horizontal segment at 220°C labeled '60 seconds or below'.</p> <p>Conditions</p> <ul style="list-style-type: none"> 1. Peak temperature Maximum of 250°C 2. Heating part Minimum of 220°C within 60 seconds 3. Preheating part 150 to 180°C 90 to 120 seconds 4. Number of times Maximum of 2 cycles <p>Note 1 : The temperature shows PCB surface temperature near the connector lead part.</p>
2. Recommended hand solder conditions	Soldering iron temperature 340 ±10°C, solder time no more than 3 seconds
3. Recommended screen thickness: Opening ratio (pattern area ratio)	Thickness : 0.12mm Opening ratio : DS side 80% DP side 80%
4. Leaning of PCB	Max 0.02mm at the center of connector (using both edges of connector as criteria)
5. Washing	Cleaning/washing is not recommended for this connector. Cleaning agents can deteriorate the mechanical operation and the environmental resistance of this connector.
6. Precautions	<ul style="list-style-type: none"> ■ Do not mate or unmate these connectors until they are mounted, failure to follow this precaution can lead to deformation or damage to these connectors. ■ Provide another form of support to the PCB, this connector was not designed to be the main form of support. ■ Mating and unmating with excessive force can cause damage. ■ Do not apply excessive amounts of flux as it may cause excess solder and flux wicking. ■ There may be a slight variance in the color of the molding between production lots, this variance will not affect the performance of the connector. ■ Refer to the next page for the handling precautions when mating and unmating the connectors. ■ If the connector becomes disconnected due to impact, a fall or a counterforce to the FPC, it may be necessary to hold the connector in place with an addition to the device's case or other cushioning material to hold the connector in place.

◆Precautions when connector mating

	
	
	<p>Prior to mating, locate the guidance ribs and align the header.</p> <p>Do not apply excess force to the connector during mating. Doing so can lead to contact damage.</p>
	<p>Make sure that the connector is parallel to the other side, it then will drop down slightly. Continue to press it down until it is fully mated while maintaining the angle. Do not apply excessive force as it may damage the contacts.</p>

◆Precautions when unmating a connector

	
	<p>To unmate this connector, lift evenly across the header, making sure that each side stays parallel to each other.</p>
 <p>Pitch direction</p> <p>Corner direction</p>	<p>If circumstances prevent the connectors from staying parallel to each other, then one side may be lifted as shown in the diagram. This method is only approved if the connector is mounted onto an extremely rigid circuit board. If the board were to warp during this process it may result in damage to the connector or its solder joints.</p> <p>Do not try to disconnect these connectors by pulling on one side or a corner, or unmate it while it is securely mounted onto a rigid FPC. These actions may lead to deformities and ultimately a damaged connector.</p>
 <p>Width direction</p>	<p>As shown in the figure to the left, do not unmate it from the width direction (front to back), it may damage contacts.</p>

◆ Precautions when unmating a connector

When mounting the receptacle side to FPC which does not have enough rigidity, the contact may peel away soldered connection.

We recommended to mount the header side to the FPC.

We have conducted evaluations on the requirements needed for FPC rigidity. If you need to mount the receptacle to the FPC, contact your local Hirose Rep for this data.

Even when mounting the header side to FPC, if the rigidity of FPC is low, the connector may break as shown in the left figure. Please check the strength and durability of FPC before using.

For the evaluation results of each item and FPC rigidity, please contact us.
